Objective :

Create the foundational feature that allows users to **dynamically** create and publish new initiatives on the platform.

- **UI (User Interface) :**

- ✓ Create the floating action button and it's pop-up.
- ✓ Build a UI form for creating initiatives.
- ✓ Add fields for the initiative title, a detailed description.. .
- ✓ Implement a visibility selector with options for "Public," "Organization," ,"User" and "Private."
- ✓ If "Organization" or "User" is selected, add a dropdown to choose the organization.
- ✓ Implement Validation for all fields

- Backend Logic :

- ✓ Create an API endpoint to receive and process initiative creation requests..
- ✓ Data transformation with unique ID generation for `related_operational_domains` and `related_functional_areas`.
- ✓ Prepare the data that's going to be pushed into the database
- ✓ Develop the logic to save the initiative and its `rfa` and `rod` to the database.
